

Rhea Kapoor - Pune, India - [rhea.kapoor@email.com](mailto:rhea.kapoor@email.com) - [github.com/rheakapoor](https://github.com/rheakapoor). I am a final year computer science student (B.Tech Computer Science, 2022 - 2026) who has spent the last two years building web applications. From Jun 2025 - Nov 2025 I interned at Zerodha as a Software Engineering Intern, where I built React dashboards consumed by over 300 internal users and developed Node.js services exposing REST APIs for trade reconciliation. I wrote MongoDB aggregation pipelines that power their analytics views, containerised the service with Docker and deployed it to AWS, and added Jest unit tests that raised coverage from 34 percent to 81 percent. Alongside that I built LedgerLite, a full stack expense tracker with a React frontend and a Node.js and Express backend, using MongoDB for persistence and JWT for authentication, with a CI pipeline running Jest on every push and deployment through Docker. Day to day I work in JavaScript and TypeScript, and I am comfortable with SQL, Git, AWS, HTML, CSS and working in an Agile team.
